EXECUTIVE SUMMARY OF THE PROJECT

The term "cloud computing" refers to the distinct types of services and applications being delivered with the help of internet cloud platform using the devices which do not require any special applications or platform. The cloud based education system requires the use and creation of knowledge as a key factor for socio-economic, cultural and technological evolution. And to achieve this goal one needs to involve the use of technology which would allow knowledge transference and creation of new areas for education research and development. It allows for higher quality learning a platform through collaboration with other organizations and professors from other institutions and universities in planning and preparing educational resources. This technology encourages independent and active learning rather than conventional classroom learning. Cloud based learning can add new dimensions to the learning process and thereby accelerate the assimilation process.
