

## Components of Decision Theory

- **Decision Maker-**

A person who takes decision is called a decision maker. He may be a shopkeeper , manufacturer , businessman

- **Course of Action –**

These are different ways , acts or options available to the decision maker.

These could be different levels of production eg 300 units , 500 units , 800 units

Different type of production eg. Type I , Type II , Type III

Vender from whom the raw material to be purchased eg A , B , C

They are also known as Acts and are denoted by  $A_1, A_2, \dots, A_n$

- **States of nature**

They represent all future event that can occur. They may be natural possibilities , market situations or even government policies. States of nature are also known as Events and are denoted as  $S_1, S_2, S_3, \dots, S_n$ .

Decision maker has no control on Events.

- **Pay off –**

Each combination of State of nature & Course of action is associated with an amount. This amount is pay-off for that particular combination of Act and event. It could be profit – represented by positive pay-off or

loss represented by negative pay-off

	S <sub>1</sub>	S <sub>2</sub>	-----	S <sub>n</sub>
A <sub>1</sub>				
A <sub>2</sub>				
:				
A <sub>n</sub>				

- Decision making environment can be broadly classified into
  - Under Certainty
  - Under Uncertainty
  - Under Risk
  - Under Conflict

We will see Decision making Under Uncertainty & Under Risk

### **Decision Making Under Uncertainty**

- **Maximin Criterion**

Steps

1. Choose minimum payoff for each Act
2. Select maximum out of these minimum.
3. Corresponding Act is a best decision

This criterion is also known as criteria of pessimism because it reflects pessimistic attitude of the decision maker.

- **Maximax Criterion**

Steps

1. Choose maximum payoff for each Act
2. Select maximum out of these minimum.
3. Corresponding Act is a best decision

This criterion is also known as criteria of optimism because it reflects optimistic attitude of the decision maker.

- **Laplace Criterion**

Steps

1. Calculate average pay off for each Act
2. Choose maximum out of these averages
3. Corresponding Act is a best decision

- **Minimax Regret Criterion**

Steps

1. Choose maximum payoff for each Event
2. Calculate maximum payoff – individual payoff for each combination of Act &Event. This is known as Regret value for that particular combination of Act and Event
3. Select maximum Regret for each course of Action.
4. Select minimum out of these maximum.
5. Corresponding Act is a best decision

Q1. Given the following payoff matrix , select the best decision by

- i. Maximax
- ii. Maximin
- iii. Laplace
- iv. Minimax Regret Criterion

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	2500	2500	2500
A <sub>2</sub>	4000	3500	2000
A <sub>3</sub>	2500	2000	1200

**Answer:**

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	Min	Max	Avg
A <sub>1</sub>	2500	2500	2500	2500	2500	2500
A <sub>2</sub>	4000	3500	2000	2000	4000	3166.67
A <sub>3</sub>	2500	2000	1200	1200	2500	1900

$$\text{MAXIMAX} = \text{MAX} ( 2500 , 4000 , 2500 ) = 4000$$

A<sub>2</sub> is the best decision

$$\text{MAXIMIN} = \text{MAX} ( 2500 , 2000 , 1200 ) = 2500$$

A<sub>1</sub> is the best decision

$$\text{LAPLACE} = \text{MAX} ( 2500 , 3166.67 , 1900 ) = 3166.67$$

A<sub>2</sub> is the best decision

$$\text{MINIIMAX} = \text{MIN} ( 1500 , 500 , 1500 ) = 500$$

A2 is the best decision

### MINIMAX REGRET CRITERIA

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	2500	2500	2500
A <sub>2</sub>	4000	3500	2000
A <sub>3</sub>	2500	2000	1200

### REGRET TABLE

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	Max
A <sub>1</sub>	1500	1000	0	1500
A <sub>2</sub>	0	0	500	500
A <sub>3</sub>	1500	1500	1300	1500

Q2. Find the best decision using

- i. Maximax
- ii. Maximin
- iii. Laplace
- iv. Minimax Regret Criterion

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	100	150	190
A <sub>2</sub>	350	200	0
A <sub>3</sub>	-50	160	400

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	Min	Max	Average
A <sub>1</sub>	100	150	190	100	190	146.66
A <sub>2</sub>	350	200	0	0	350	183.33
A <sub>3</sub>	-50	160	400	-50	400	170

Answer :

- i. Maximax Criterion = Max (190 , 350 , 400 ) = 400  
A<sub>3</sub> is the best decision
- ii. Maximin Criterion = Max (100 , 0 , -50) = 100  
A<sub>1</sub> is the best decision
- iii. Laplace Criterion = Max (146.66 , 183.33 , 170) = 183.33  
A<sub>2</sub> is the best decision

iv. Minimax Regret Criterion

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	100	150	190
A <sub>2</sub>	350	200	0
A <sub>3</sub>	-50	160	400

Regret Table

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	Max
A <sub>1</sub>	250	50	210	250
A <sub>2</sub>	0	0	400	400
A <sub>3</sub>	400	40	0	400

Minimax Regret Criterion =  $\text{Min}(250, 400, 400) = 250$

A<sub>1</sub> is the best decision

Q3. Find the best decision using

- i. Maximax
- ii. Maximin
- iii. Laplace
- iv. Minimax Regret Criterion

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	S <sub>4</sub>
A <sub>1</sub>	2500	4000	-1800	3000
A <sub>2</sub>	4500	-1000	0	5000
A <sub>3</sub>	6000	8500	12000	10000

Answer:

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	S <sub>4</sub>	Min	Max	Avg
A <sub>1</sub>	2500	4000	-1800	3000	-1800	4000	1925
A <sub>2</sub>	4500	-1000	0	5000	-1000	5000	2125
A <sub>3</sub>	6000	8500	12000	10000	6000	12000	9125

- i. Maximax Criterion =  $\text{Max} (4000 , 5000 , 12000 ) = 12000$   
A<sub>3</sub> is the best decision
- ii. Maximin Criterion =  $\text{Max} (-1800 , -1000 , 6000) = 6000$   
A<sub>3</sub> is the best decision
- iii. Laplace Criterion =  $\text{Max} (1925 , 2125 , 9125) = 9125$   
A<sub>3</sub> is the best decision
- iv. Minimax Regret Criterion

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	S <sub>4</sub>
A <sub>1</sub>	2500	4000	-1800	3000
A <sub>2</sub>	4500	-1000	0	5000
A <sub>3</sub>	6000	8500	12000	10000

### Regret Table

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	S <sub>4</sub>	Max
A <sub>1</sub>	3500	4500	13800	7000	13800
A <sub>2</sub>	1500	9500	12000	5000	12000
A <sub>3</sub>	0	0	0	0	0

- Minimax Regret Criterion =  $\text{Min} (13800 , 12000 , 0 ) = 0$   
A<sub>3</sub> is the best decision

## Decision Making Under Risk

Here the decision maker has knowledge of probabilities of occurrence of each State of nature.

Steps

### EMV (Expected Monetary Value) Criterion

1. EMV is calculated for each course of action by taking sum of products of pay-offs & respective probabilities
2. Select the Maximum EMV
3. Corresponding Act is the optimum decision.

### EOL (Expected Opportunity Loss) Criterion

1. Calculate Regret Table
2. EOL is calculated for each course of action by taking sum of products of Regret Values & respective probabilities
3. Select the Minimum EOL
4. Corresponding Act is the optimum decision.

Q1. Obtain the best decision using EMV & EOL Criterion

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	2500	2500	2500
A <sub>2</sub>	4000	3500	2000
A <sub>3</sub>	5000	2500	1000
Probability	0.4	0.5	0.1

$$EMV(A_1) = 2500 \times 0.4 + 2500 \times 0.5 + 2500 \times 0.1 = 2500$$

$$EMV(A_2) = 4000 \times 0.4 + 3500 \times 0.5 + 2000 \times 0.1 = 3550$$

$$EMV(A_3) = 5000 \times 0.4 + 2500 \times 0.5 + 1000 \times 0.1 = 3350$$

EMV is Maximum for A<sub>2</sub>

A<sub>2</sub> is the best decision. Maximum EMV = 3550

Calculation of EOL

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	2500	2500	2500
A <sub>2</sub>	4000	3500	2000
A <sub>3</sub>	5000	2500	1000
Probability	0.4	0.5	0.1

Regret Table

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	2500	1000	0
A <sub>2</sub>	1000	0	500
A <sub>3</sub>	0	1000	1500
Probability	0.4	0.5	0.1

$$EOL(A_1) = 2500 \times 0.4 + 1000 \times 0.5 + 0 \times 0.1 = 1500$$

$$EOL(A_2) = 1000 \times 0.4 + 0 \times 0.5 + 500 \times 0.1 = 450$$

$$EOL(A_3) = 0 \times 0.4 + 1000 \times 0.5 + 1500 \times 0.1 = 650$$

EOL is Minimum for A<sub>2</sub>

A<sub>2</sub> is the best decision. Minimum EOL = 450

Q2. Obtain the best decision using EMV & EOL Criterion

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	-80	60	110
A <sub>2</sub>	40	0	-50
A <sub>3</sub>	100	-20	70
Probability	0.3	0.2	0.5

$$\begin{aligned} \text{EMV}(A_1) &= -80 \times 0.3 + 60 \times 0.2 + 110 \times 0.5 \\ &= -24 + 12 + 55 = 43 \end{aligned}$$

$$\begin{aligned} \text{EMV}(A_2) &= 40 \times 0.3 + 0 \times 0.2 - 50 \times 0.5 \\ &= 12 + 0 - 25 = -13 \end{aligned}$$

$$\begin{aligned} \text{EMV}(A_3) &= 100 \times 0.3 - 20 \times 0.2 + 70 \times 0.5 \\ &= 30 - 4 + 35 = 61 \end{aligned}$$

EMV is Maximum for  $A_3$

$A_3$  is the best decision. Maximum EMV = 61

Calculation of EOL

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	-80	60	110
A <sub>2</sub>	40	0	-50
A <sub>3</sub>	100	-20	70
Probability	0.3	0.2	0.5

Regret Table

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
A <sub>1</sub>	180	0	0
A <sub>2</sub>	60	60	160
A <sub>3</sub>	0	80	40
Probability	0.3	0.2	0.5

$$\text{EOL}(A_1) = 180 \times 0.3 + 0 \times 0.2 + 0 \times 0.5 = 54$$

$$\text{EOL}(A_2) = 60 \times 0.3 + 60 \times 0.2 + 160 \times 0.5 = 18 + 12 + 80 = 110$$

$$\text{EOL}(A_3) = 0 \times 0.3 + 80 \times 0.2 + 40 \times 0.5 = 0 + 16 + 20 = 36$$

EOL is Minimum for  $A_3$

$A_3$  is the best decision. Minimum EOL = 36

Q3. Obtain the best decision using EMV & EOL Criterion

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	S <sub>4</sub>
A <sub>1</sub>	100	600	-300	100
A <sub>2</sub>	800	0	200	0
A <sub>3</sub>	-100	400	0	200
A <sub>4</sub>	0	600	600	0
Probability	0.15	0.45	0.25	0.15

$$\begin{aligned} \text{EMV}(A_1) &= 100 \times 0.15 + 600 \times 0.45 - 300 \times 0.25 + 100 \times 0.15 \\ &= 15 + 270 - 75 + 15 = 225 \end{aligned}$$

$$\begin{aligned} \text{EMV}(A_2) &= 800 \times 0.15 + 0 \times 0.45 + 200 \times 0.25 + 0 \times 0.15 \\ &= 120 + 0 + 50 + 0 = 170 \end{aligned}$$

$$\begin{aligned} \text{EMV}(A_3) &= -100 \times 0.15 + 400 \times 0.45 + 0 \times 0.25 + 200 \times 0.15 \\ &= -15 + 180 + 0 + 30 = 195 \end{aligned}$$

$$\begin{aligned} \text{EMV}(A_4) &= 0 \times 0.15 + 600 \times 0.45 + 600 \times 0.25 + 0 \times 0.15 \\ &= 0 + 270 + 150 + 0 = 420 \end{aligned}$$

EMV is Maximum for A<sub>4</sub>

A<sub>4</sub> is the best decision. Maximum EMV = 420

Calculation of EOL

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	S <sub>4</sub>
A <sub>1</sub>	100	600	-300	100
A <sub>2</sub>	800	0	200	0
A <sub>3</sub>	-100	400	0	200
A <sub>4</sub>	0	600	600	0
Probability	0.15	0.45	0.25	0.15

## Regret Table

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	S <sub>4</sub>
A <sub>1</sub>	700	0	900	100
A <sub>2</sub>	0	600	400	200
A <sub>3</sub>	900	200	600	0
A <sub>4</sub>	800	0	0	200
Probability	0.15	0.45	0.25	0.15

$$\begin{aligned} \text{EOL}(A_1) &= 700 \times 0.15 + 0 \times 0.45 + 900 \times 0.25 + 100 \times 0.15 \\ &= 105 + 0 + 225 + 15 = 345 \end{aligned}$$

$$\begin{aligned} \text{EOL}(A_2) &= 0 \times 0.15 + 600 \times 0.45 + 400 \times 0.25 + 200 \times 0.15 \\ &= 0 + 270 + 100 + 30 = 400 \end{aligned}$$

$$\begin{aligned} \text{EOL}(A_3) &= 900 \times 0.15 + 200 \times 0.45 + 600 \times 0.25 + 0 \times 0.15 \\ &= 135 + 90 + 150 + 0 = 375 \end{aligned}$$

$$\begin{aligned} \text{EOL}(A_4) &= 800 \times 0.15 + 0 \times 0.45 + 0 \times 0.25 + 200 \times 0.15 \\ &= 120 + 0 + 0 + 30 = 150 \end{aligned}$$

EOL is Minimum for A<sub>4</sub>

A<sub>4</sub> is the best decision. Minimum EOL = 150

## Decision Tree

Decision tree is a graphical representation of a decision process involving multiple stages. It indicates all the courses of actions, States of nature with associated probabilities and conditional payoffs of a decision problem.

A decision node is represented by a square and states of nature node is represented by a circle. Usually decision nodes are numbered using A,B,C,.. from left to right and states of nature nodes are numbered as 1,2,3... sequentially from left to right.

Different courses of action originate as branches from the decision node. At the end of each branches , there are states of nature nodes. These states of nature emerge as sub branches from these nodes. The associated probabilities and pay offs are shown on the branches. Expected Monetary Value are calculated for each course of action. The Course of action with maximum EMV is the optimum decision.
